MEMORANDUM FOR: [REDACTED]

SUBJECT : Critique of Summer Intern Program

1. These briefings are of distinctive value and have been most informative and entertaining. [REDACTED] talk on the C.T.P. was of exceptional merit and relevance to myself as it divulged a previously unknown opportunity. There was a bit of understandable overlap in the last few weeks with Mr. Duchett's talk which emphasized the role of satellite reconnaissance and our later NPIC tour. Relatively little information was presented concerning alternate sources of information and the activities of the DDO. That part of the Agency still seems to be in a shroud, perhaps unnecessarily since no one representing that directorate spoke with us. STAT

2. In my capacity as an analyst I needed an immediate association with the research facilities available in the Agency. For this reason I think the CRS briefing should be conducted as soon as possible, perhaps even scheduling it in the same week as the introductory meeting. Expansion of the CRS lecture to include the procedures to follow and people to contact in the DCS, Interagency Services, and Systems Analysis departments would also be an aid, perhaps including a list of names, phone numbers, and services provided.

3. Processing of my application occurred efficiently and my interviews and testing were well scheduled. However, notification of employment was much later than desired. I was not confirmed until late April, whereas I was forced to turn down other job offers as early as January and gamble on being accepted here. Considering that applications were solicited in October, confirmation should have been much sooner than April. I plan on applying again for an internship next summer and would appreciate being informed of my status by the end of this summer.

4. I shall return to Hopkins this fall and continue schooling for at least one more year.
